Change Management Request Form

Change Description/ Change Request Filename: Site-to-Site IPsec VPN Between HQ and Data Center				
Change Request No.:	TBD	Project:	Advanced Routing	
Requested by:	Sidney Kim	Date:	8/17/26	
Department/ location	Aston Technologies	Telephone:	(413)461-8605	
Description of the change: Implementation of a Site-to-Site IPsec VPN between the HQ Network and Data Center Network using FortiGate firewalls across the Internet.				
This change includes: - Configuring a route-based IPsec VPN between HQ-FW-A and DC-FW-A - Establishing secure connectivity between HQ Network (10.42.0.0/16) and DC Network (10.50.0.0/16) - Configuring IKEv2 Phase 1 and Phase 2 VPN parameters - Creating VPN routing entries between both protected networks - Creating VPN security policies on both FortiGate firewalls - Enabling secure communication between internal hosts located at each site - Validating encrypted connectivity between HQ-HOST-A (10.42.10.6) and DC-HOST-A (10.50.10.10) - Verifying local Internet access remains operational at both sites				
Change needed by (date): 8/19/26				
Reason for the change: The HQ Network and Data Center Network currently operate as independent environments connected to the Internet but are unable to communicate securely with one another.				
This change is required to: - Establish secure encrypted communications between HQ and Data Center resources - Enable secure management and administration of remote systems - Allow application and infrastructure traffic to traverse untrusted networks securely - Provide connectivity between the 10.42.0.0/16 and 10.50.0.0/16 networks - Create a foundation for future centralized services hosted within the Data Center - Improve overall network functionality and scalability

Change Impact Evaluation				
Change Type		Application		Database
		Hardware		Procedures
	X	Network		Security
		Operating System/Utilities		Schedule Outage
Change Priority		Urgent	Change Impact	X Minor
		High		Medium
	X	Medium		Major
		Low		
Environment(s) impacted: - HQ-FW-A - HQ-ISP-DEMARC - HQ-SW-A - HQ-HOST-A - DC-FW-A - DC-ISP-DEMARC - DC-SW-A				

- DC-HOST-A
- HQ Network (10.42.0.0/16)
- DC Network (10.50.0.0/16)

Resource requirements: (personnel, h/w, s/w):

Personnel

- Network Engineer

Hardware

- HQ-FW-A
- DC-FW-A
- HQ-ISP-DEMARC
- DC-ISP-DEMARC
- HQ-SW-A
- DC-SW-A

Software / Services

- FortiOS 7.0.12
- IPsec VPN
- IKEv2
- NAT Traversal
- Route-Based VPN

Test Plan Description:

- Verify Internet connectivity from HQ-HOST-A.
- Verify Internet connectivity from DC-HOST-A.
- Verify VPN tunnel configuration exists on HQ-FW-A and DC-FW-A.
- Verify Phase 1 negotiation is successful.
- Verify Phase 2 negotiation is successful.
- Verify VPN tunnel status reports:
- selectors(total,up): 1/1
- Verify HQ-HOST-A (10.42.10.6) can communicate with DC-HOST-A (10.50.10.10).
- Verify DC-HOST-A (10.50.10.10) can communicate with HQ-HOST-A (10.42.10.6).
- Verify traffic traverses the IPsec tunnel successfully.
- Verify Internet connectivity remains available at both sites after VPN implementation.

Rollback Description: If issues occur:

- Disable the Site-to-Site IPsec VPN on HQ-FW-A.
- Disable the Site-to-Site IPsec VPN on DC-FW-A.
- Remove VPN-specific routes.
- Remove VPN-related firewall policies.
- Remove VPN tunnel configuration objects.
- Verify Internet connectivity remains operational at both sites.
- Verify independent operation of HQ and Data Center networks.
- Return both environments to their pre-change state.
