Change Management Request Form

Change Description/ Change Request Filename: FortiGate SD-WAN Deployment for Dual ISP Redundancy and Automatic WAN Failover					
Change Request No.:	TBD	Project:	Advanced Routing		
Requested by:	Sidney Kim	Date:	7/8/26		
Department/ location	Aston Technologies	Telephone:	(413)461-8605		
Description of the change: Implementation of FortiGate SD-WAN to provide Internet resiliency, intelligent WAN path selection, and automatic failover between the DIA and Broadband Internet circuits. This change includes: • Enabling SD-WAN on the FortiGate HA cluster • Adding DIA and Broadband WAN interfaces as SD-WAN members • Configuring Performance SLA monitoring • Implementing WAN health probes to 8.8.8.8 and 1.1.1.1 • Creating SD-WAN traffic steering policies • Updating Internet access policies to utilize the SD-WAN virtual WAN interface • Validating Internet connectivity across both providers • Validating automatic ISP failover and recovery behavior					
Change needed by (date): 8/11/26					
Reason for the change: The current environment utilizes two independent Internet providers but lacks intelligent WAN path selection and automatic failover capabilities. This change is required to: • Improve Internet availability and resiliency • Eliminate manual intervention during ISP outages • Automatically detect WAN failures using SLA monitoring • Maintain Internet connectivity when a provider becomes unavailable • Automatically restore traffic to the preferred DIA circuit after recovery • Enhance overall network reliability for users within the 10.42.0.0/16 network

Approval of Request:					
Change Impact Evaluation					
Change Type		Application		Database	
		Hardware		Procedures	
	X	Network		Security	
		Operating System/Utilities		Schedule Outage	
Change Priority		Urgent	Change Impact		
		High		X	Minor
	X	Medium			Medium
		Low			Major
Environment(s) impacted: • FG-FW-A • FG-FW-B • ISP-DIA • ISP-BB • SW-DIA • SW-BB					

- HQ-Network (10.42.0.0/16)
- Internet Connectivity Services

Resource requirements: (personnel, h/w, s/w):

Personnel

- Network Engineer

Hardware

- FG-FW-A
- FG-FW-B
- ISP-DIA
- ISP-BB

Software / Services

- FortiOS 7.0.12
- FortiGate SD-WAN
- OSPF
- Performance SLA Monitoring

Test Plan Description:

- Verify DIA and Broadband WAN interfaces are operational.
- Verify SD-WAN is enabled and both WAN members are present.
- Verify DIA_SLA and BB_SLA report healthy status.
- Generate outbound traffic to Internet destinations.
- Verify SD-WAN traffic steering policies select the correct WAN interface.
- Review FortiGate traffic logs to confirm WAN path selection.
- Disconnect the DIA circuit.
- Verify SLA failure detection.
- Verify traffic automatically fails over to Broadband.
- Restore DIA connectivity.
- Verify traffic automatically returns to the preferred DIA circuit.
- Confirm Internet connectivity remains available throughout testing.

Rollback Description: If issues occur:

- Remove SD-WAN traffic steering policies.
- Remove Performance SLA monitors.
- Remove WAN interfaces from SD-WAN membership.
- Disable SD-WAN functionality.
- Restore original static routing configuration.
- Verify Internet connectivity through the primary WAN circuit.
- Verify FortiGate HA status remains healthy.
- Validate Internet access from internal hosts.
